

Boom Aerial Practical Evaluation

This hands-on training will provide the participant with the opportunity to apply the previously learned theoretical knowledge to the proper operation of an aerial work platform (boom). This is the second part of a two-part requirement to become a qualified boom aerial work platform operator

Participants will:

- Recognize and understand all limitations and warnings, operating procedures and operator's responsibilities for maintenance of the equipment.
- Demonstrate familiarity with the Operating Maintenance and Parts Manual and Operator's Manual provided by the manufacturer for the specific make and model he or she will be using.
- Learn how to apply employer's rules and any government-related regulations.
- Demonstrate his/her ability to understand and properly operate the boom work platform as shown by a qualified person.

Method of Instruction: Evaluation of practical demonstration.

Who Should Attend: Leadership positions and Employees who are required to operate elevated work platforms and/or booms.

Course Length: 1/2 hour per person.

- Course materials and wallet cards provided.
