

## Lift Truck Practical Evaluation

This hands-on evaluation will provide the participant with the opportunity to apply the previously learned theoretical knowledge to the proper operation of lift truck.

### Participants will:

- Demonstrate that they have retained and understood the information covered in the theoretical portion of the program, by participating in a practical lift truck assessment.
- Areas covered during the practical component include, basic load handling procedures, safe operating practices, pre-use inspections, stacking/de-stacking loads, parking a lift truck, pre-use inspections, propane exchange and/or battery charging.

Optional; Client provides operator manuals and policies.

- Review of Manufacturer operations manual(s) – additional preparation time and cost for each class/code of truck.
- Review of Company Policy – additional preparation time.

Method of Instruction: Evaluation of practical demonstration.

Who Should Attend: Supervisors, and Employees who are required to operate a lift truck.

### Course Length:

- ***Non-experienced operators*** 1-2 hours per person. (It is recommended that operators have 8 hours of practice prior to this component of the training).
- ***Experienced operators*** 1 hour per person.
- Evaluation forms and wallet cards provided upon successful completion.
