

Gambit Industrial Health and Safety Consultants Inc.

## Spill Response

In this module participant will learn that responding to spills requires planning. Not knowing hazards can lead to injuries, illness, structural, environmental, and equipment damage.

### Participants will:

- Understand the hazards related to various chemicals.
- Conduct an assessment of their facility to determine risk potential.
- Review the framework for developing a spill response plan.
- Review various types of personal protective equipment and their application.
- Review training needs for spill response personnel.
- Complete a questionnaire at the end of the course.

Method of Instruction: Brief lecture, interactive presentation, video, and spill clean up demonstration can be arranged.

Who Should Attend: Manager, Maintenance Personnel, Supervisors, Employees and Joint Health and Safety Committee Members.

Course Length: 2 hours

- Course materials and certificates provided
